

TRAINING MODULE • 2025

Tickets & Social Media

Customer Service Onboarding for the Tickets Team

What you'll master today

Five modules — process, systems, soft skills, policies, and a hands-on assessment.

REVIBE

01

Process & Communication

Greeting, tone, FRT, ticket ordering

02

Systems & Tools

Orders App, Claims App, Gorgias

03

Soft Skills

Retention, de-escalation, escalation

01

Process & Communication

How we greet, reply, and prioritize — the workflow that every ticket follows from open to wrap-up.

PROCESS

The 5-stage ticket workflow

Every ticket — email or social DM — flows through these five stages. Skipping any stage breaks the customer experience.

REVIBE

! **Sequencing rule:** stages run in order. You may return to an earlier stage (e.g., re-verify identity during retention), but you never skip ahead to wrap-up.

PROCESS

Greeting scripts & opening tone

Use these as macros — don't repeat the same opening in the same thread.

REVIBE

” Top 5 opening lines (use macros)

- 01 "Hi {name}, thanks for reaching out to Revibe — I'm {your name} and I'll help you with this."
- 02 "Hello {name}, I see your message about {topic}. Let me look into this for you right away."
- 03 "Hey {name}, sorry for the trouble — I've got your ticket and I'm on it."
- 04 "Hi {name}, thanks for your patience. I've reviewed your order and here's what I found."
- 05 "{name}, I completely understand the frustration — let's get this fixed together today."

PRIORITIZE MACROS

Every greeting above exists as a Gorgias macro. Search before typing.

Why this matters

The first reply sets the CSAT score — **70%** of customers rate based on the opening tone.

Repeating the same opener in a thread feels robotic and drops QA scores.

A warm macro lets you hit FRT (6 hrs) without sacrificing tone.

Tip: rotate macros across a thread — never reuse #1 twice.

Etiquette & AI tool tone rules

Email & DM etiquette

- ✓ Always use the customer's name at least once.
- ✓ One issue per ticket — if a second issue appears, open a new ticket and merge.
- ✓ Keep replies under 150 words; link to help articles for long explanations.
- ✓ Sign off with the Revibe signature block (name, role, Revibe logo, help-center link).
- ✓ Never paste raw AI output — edit for brand voice and accuracy.

150-word cap keeps scanning easy on mobile — most DMs are read on phones.

AI tools — same tone rules apply

ChatGPT

DeepSeek

Gemini

Allowed for drafting, but:

- ✓ Read every line before sending — AI invents policies.
- ✓ Match the macro tone — warm, plain language, no corporate jargon.
- ✓ Never paste customer PII (order numbers OK; addresses/phones NO).
- ✓ If the AI draft feels off, rewrite it — don't ship a robotic reply.

WHY IT MATTERS

A customer can tell an unedited AI reply in 2 seconds. It tanks CSAT and breaks brand trust.

PROCESS

First Response Time & ticket order

Two non-negotiable rules that protect SLA and fairness.

REVIBE

FRT TARGET

6 hrs

First Response Time — clock starts at ticket open.

RESOLUTION TARGET

24 hrs

Soft target; complex claims may take longer with updates.

TICKET ORDER

Oldest → Newest

Always work the oldest unassigned ticket first.

Why these rules exist

CUSTOMER EXPERIENCE

- A reply within 6 hrs reduces escalation risk by **40%**.
- Customers waiting >24 hrs post in public channels (Reddit, Instagram).
- Aging tickets trigger SLA breach reports to leadership.

OPERATIONAL FAIRNESS

- Oldest-first prevents cherry-picking easy tickets.
- Helps the team hit the Resolved Tickets KPI (65 target / 75 high-performer).
- Reduces duplicate tickets — the same customer opens fewer follow-ups.

3 things to remember

REVIBE

01

WORKFLOW

Follow the 5-stage workflow on every ticket — greeting, etiquette, systems, retention, wrap-up. No skipping.

02

SPEED & ORDER

FRT is 6 hours. Work oldest→newest. Use macros for greetings, never repeat openers in a thread.

03

AI TOOLS

AI tools (ChatGPT, DeepSeek, Gemini) are allowed but must match macro tone — never ship unedited drafts, never paste PII.

CHECK

You can now move on to Systems & Tools.

02

Systems & Tools

The three platforms you'll live in — Orders App, Gorgias — and the KPIs that measure your performance.

Orders App — admin.revibe.me

Verify customer identity and review order details before any policy decision.

Step-by-step

- 1 Log in at **admin.revibe.me** with your team credentials.
- 2 Search the customer by email OR order # (top search bar).
- 3 Open the customer record — verify: name, email, shipping address, order history.
- 4 Open the relevant order — check: status (paid/shipped/delivered), items, tracking #, payment method.
- 5 Screenshot the order if escalating — attach to the Gorgias ticket.

WHY Identity verification prevents fraud and ensures you apply the right country policy (UAE/KSA/ZA/MX).

REVIBE

Gorgias — tagging, closing, snoozing

Core actions

Tagging

Apply at least one tag per ticket: topic (billing/shipping/defect/return), sentiment, country. Tags power reporting and QA.

Closing

Only close after the customer confirms OR 48 hrs pass with no reply. Always leave a final message.

Snoozing

Snooze when waiting on the customer or a 3rd party (courier, supplier). Set the wake date — never snooze >7 days without a note.

REVIBE

CRITICAL RULE

Quality auto-fail

A ticket with NO tag at close = automatic QA fail (0 score) — no exceptions.

Even a perfect reply scores 0 if untagged. Tag before you close, every time.

AUTO-FAIL TRIGGER

Why tagging matters

- Untagged tickets can't be reported on — leadership can't see trends.
- QA sampling pulls by tag — untagged tickets hide your best work.

Social comments — hide vs. reply

Instagram, Facebook, and TikTok comments flow into Gorgias. Decide fast: reply publicly, reply DM, or hide.

REVIBE

REPLY (public)

WHEN TO REPLY PUBLICLY

- Genuine product question (specs, price, availability).
- Positive review — thank them.
- Shipping/ETA question that helps others reading.

TEMPLATE

"Hi {name}! The {product} is in stock — DM us or tap the link in bio. ☐"

HIDE (then DM)

WHEN TO HIDE + DM

- Complaint about a specific order (never public).
- Angry/abusive language.
- Personal info shared (phone, address).
- Refund/warranty request — always take private.

TEMPLATE DM

"Hi {name}, saw your comment — I want to help. Can you DM your order #? Thanks for your patience."

NEVER DELETE

Hiding removes the comment from public view but keeps it in Gorgias. **Deleting loses the audit trail** — never delete.

Your KPIs — how you're measured

Gorgias dashboard tracks these four metrics weekly. Hit target = on track. Hit high-performer = eligible for quarterly bonus.

REVIBE

Resolved Tickets

TARGET

65

HIGH PERFORMER

75

Tickets you close per week (excludes auto-closed).

QA Score

TARGET

80%

HIGH PERFORMER

90%

Quality Assurance score on sampled tickets — see slide 12 for auto-fail rules.

CSAT

TARGET

3.7

HIGH PERFORMER

4.1

Customer Satisfaction score, 1–5 scale, post-resolution survey.

FRT

TARGET

6 hrs

HIGH PERFORMER

4 hrs

First Response Time — clock starts at ticket open, stops at your first reply.

If you're below target on any KPI for 2 weeks, your team lead schedules a 1:1 coaching session — not a penalty. **Early coaching prevents PIPs.**

3 things to remember

Three takeaways from the Systems & Tools section — what every Revibe TM must carry into every shift.

01

Verify identity in Orders App + investigate BEFORE making any promise. Never guess a claim's status.

02

Every ticket gets a tag before close. No tag = automatic QA fail (0), no exceptions. Close only after customer confirms or 48 hrs pass.

03

Your KPIs: Resolved 65/75, CSAT 3.7/4.1, QA 80%/90%, FRT 6 hrs/4 hrs. Two weeks below target triggers coaching, not punishment.

03

Gorgias Walkthrough

Navigating the tool day-to-day — your home dashboard, inbox, the send-and-snooze rule, macros, tags, and how to track your own daily numbers.

PROCESS → SYSTEMS → **GORGIAS** → SOFT SKILLS

Home page — your daily dashboard

Your day starts here. Check your CSAT first — it's the metric that matters most.

What you'll see on the home page

-  **CSAT score (TODAY)** — your most important number. Reflects customer happiness from yesterday's closed tickets.
-  **Resolved tickets (TODAY)** — how many you've closed today vs. target (65).
-  **First Response Time** — your average FRT today vs. 6-hour target.
-  **Open tickets** — how many are assigned to you right now.
-  **SLA breach risk** — tickets nearing the 6-hour FRT deadline (act on these first).

 **Check CSAT first, every morning.** If it dropped overnight, review yesterday's closed tickets to see what went wrong.

SCREENSHOT PLACEHOLDER

Gorgias Home Page — daily dashboard with CSAT, resolved tickets, FRT, and open ticket count.

Inbox — where your tickets live

All emails assigned to you appear here. New tickets can arrive at any moment — that's normal.

How the inbox works

-  All tickets assigned to you show in the inbox, sorted **oldest-first** by default.
-  Tickets are assigned to you throughout the day — **this is normal**. If a customer chooses to speak to an agent, the ticket is randomly assigned.
-  New tickets can appear mid-shift. Don't panic — work **oldest-to-newest**.
-  Use **filters** (status, channel, tag) to find specific tickets fast.
-  Search bar at the top finds any ticket by keyword, customer email, or order number.

 **Random assignment is NOT a mistake.** When a customer picks 'talk to an agent,' the system assigns randomly to balance load. Everyone gets their share.

SCREENSHOT PLACEHOLDER

Gorgias Inbox — list of assigned tickets with status badges, channel icons, and timestamps.

Send & Snooze — the survey timing rule

The CSAT survey fires the moment you send your last email AND close the ticket. Get this wrong and your score tanks.

WHY THIS MATTERS

If you close a ticket before the issue is truly resolved, the CSAT survey goes out **immediately**. The customer rates a broken experience — and that **1-star** or **2-star** stays on your score for the week. **Send & Snooze** delays the survey until you have proof the issue is fixed.

RULE OF THUMB

Not 100% sure it's resolved? **Snooze**. You can always close later.

Macros — search before you type

Macros save time, keep tone consistent, AND auto-apply the right tags. Always search the macro library first.

☰ How to use macros

- 1 Before typing a reply, click the **macro search box** (bottom of the reply editor).
- 2 Type a relevant keyword — e.g. "**refund**", "**delay**", "**warranty**", "**cancel**", "**tracking**".
- 3 Review the matching macros. Click one to **insert** it into your reply.
- 4 **EDIT** the inserted text — personalize with the customer's name and specific details.
Never send a macro raw.
- 5 The macro auto-applies the correct tags — you don't have to tag manually (but **always verify**).

✦✦ Why macros are powerful:

- ⚡ **Saves time** — 1 click vs. typing 150 words.
- ⚡ **Consistent tone** — every agent sounds like Revibe.
- ⚡ **Auto-tags** — the macro applies the right topic/sentiment tags for you (still verify before closing).

SCREENSHOT PLACEHOLDER

Gorgias macro search box — type a keyword, pick a macro, it inserts + auto-tags.

Tags — why they matter + the library

Tags drive QA (no tag = auto-fail) AND business decisions. Leadership pulls reports by tag to spot trends.

Tags = business decisions

When 'order_delay' spikes, Operations investigates the courier. When 'battery_health_issue' rises on a batch, Product checks the supplier. Your tagging is how leadership sees what's happening.

Tags = your QA score

A ticket closed with no tag = automatic QA fail (0). Always tag. Macros auto-tag, but verify before closing.

Order & Delivery

inbound

Full tag library lives in Gorgias → Settings → Tags. Search to apply. Cryptic internal codes (T-codes, SM-codes, C-codes) are deprecated — use the readable tags above.

Track your daily closed tickets

See exactly how many tickets you've closed today, plus your CSAT, FRT, and QA — in 3 clicks.

How to find your stats

STEP 01

Hover over **"Statistics"** in the Gorgias top navigation bar.

STEP 02

Click **"Agents"** in the dropdown menu.

STEP 03

Find **yourself** in the agent list (sorted alphabetically or by performance).

STEP 04

Click your name to see your **personal dashboard**.

What you'll see:

Tickets closed today

CSAT (today/week)

FRT average

QA score

Open tickets

SLA breach count

TIP

Check this **2-3 times per shift**. Behind on resolved count? Pick up the pace. CSAT dipped? Slow down and focus on quality.

SCREENSHOT PLACEHOLDER

Gorgias → Statistics → Agents — your personal row showing closed tickets, CSAT, FRT, and QA for today.

3 things to remember

Three takeaways from the Gorgias Walkthrough — your daily playbook inside the helpdesk.

01

Start your day on the home page — check CSAT first. New tickets arrive in your inbox all day via random assignment; that's normal. Work oldest-to-newest.

02

Not fully resolved? Send & Snooze — never close. The CSAT survey fires the moment you close. Snooze until you have proof the issue is fixed, then close.

03

Always search macros before typing — they auto-apply the right tags. Tags drive QA (no tag = auto-fail) AND business decisions. Verify tags before closing.

CHECK

You now know how to navigate Gorgias day-to-day.

04

Soft Skills

Retention, de-escalation, and escalation — the hardest skills to build, and the ones that decide whether a customer stays.

Retention — cancellation attempts

When a customer asks to cancel, run ONE retention line before processing. Don't push past one no.

☰ Top 5 retention lines

- 1 "I'd love to keep you as a customer — can I offer 10% off your next order if you stay?"
- 2 "Before I cancel, can I check — was there an issue with the device? I can arrange a free inspection instead."
- 3 "Got it. Just so I can pass feedback to the team — what made you decide to cancel?"
- 4 "I can pause your order instead of cancelling — no charge, resume anytime in 30 days."
- 5 "Understood. I'll process the cancel. As a thank-you for trying Revibe, here's a 75 AED code for whenever you're ready to come back."

— Do NOT retain when:

- ⊘ Customer is angry or abusive — just cancel fast.
- ⊘ Cancel reason = fraud or scam suspicion — escalate, don't retain.
- ⊘ Item already delivered + return window passed — process, don't retain.
- ⊘ Customer explicitly says don't try to save the order.

WHY

Pushing retention on an angry customer = negative review + social media complaint. **Read the room.**

Wrap-up checklist — every ticket

Run this mental checklist before closing. Missing one = rework later.

01

Promote self-service

Link the help-center article that solves this — next time they may not need a ticket.

02

Signature block

Name, role, Revibe logo, help-center link. Use the macro — never type it.

03

Escalation path

If unresolved, tag **#escalation** + assign to team-lead queue with full context.

04

Update inventory/claims

If return/exchange, confirm Claims App status matches what you told the customer.

05

Tag the ticket

Topic + sentiment + country. No tag = QA auto-fail.

06

Customer confirms OR 48 hrs

Close only when resolved + acknowledged, or 48 hrs with no reply.

Handling angry customers — the **LEARN** method

Use this 5-step framework on every angry ticket. It de-escalates 80% of cases without escalation.

L**Listen**

Read the full message before replying. Don't interrupt with a fix yet.

E**Empathize**

Name the feeling: "I can hear how frustrating this is."

A**Apologize**

Own it, even if it's not your fault: "I'm sorry this happened."

R**Resolve**

Offer the specific fix + timeline. One concrete next step.

N**Notify**

Tell them what you'll do next and when they'll hear back.

” SAMPLE SCRIPT (ANGRY CUSTOMER, DELAYED DELIVERY)

"Hi Sara, I've read your message twice — I can hear how frustrating it is to wait this long for an order you were excited about, and I'm genuinely sorry. I've checked with DHL — your package is held at the Dubai hub. I've escalated it for priority delivery tomorrow before 12pm, and I'll personally message you the moment it's out for delivery. If it doesn't arrive by 12pm tomorrow, I'll refund your delivery charge in full. Thank you for your patience."

DO

- ✓ Use the customer's name.
- ✓ Give a concrete timeline.
- ✓ Acknowledge the specific issue.
- ✓ Offer compensation when warranted.

DON'T

- ✗ Say "calm down" or "as I mentioned before."
- ✗ Make promises you can't keep.
- ✗ Blame the courier or another team.
- ✗ Send a wall of text — keep it under 120 words.

Weak vs. strong replies — **calibrate your tone**

Three real-world contrasts. The weak version is a common AI/rookie mistake. The strong version is what passes QA.

GREETING (DELAYED REPLY)

WEAK

"Hi, Sorry for the delay. We apologize for the inconvenience. Please provide your order number so we can look into this. Regards, Support Team."

vs

STRONG

"Hi Mariam — sorry for the wait, you shouldn't have had to follow up. I've got your order (#RVB-10245) open now and I'm checking the courier status. I'll come back to you within the hour with a real update. — Youssf, Revibe Support."

EMPATHY (DEFECT CLAIM)

WEAK

"We are sorry to hear about the issue with your device. Please note that all our devices undergo a 70-point inspection. We will need you to send photos."

vs

STRONG

"That's really frustrating — a screen that flickers after 3 weeks isn't what you paid for. I'm going to get this sorted. Can you send 2 photos (screen on + screen off) so I can fast-track the replacement? I'll arrange pickup at our cost."

DE-ESCALATION (ANGRY CUSTOMER)

WEAK

"Please calm down. As per our policy, returns must be within 10 days. You are past the window. We cannot help."

vs

STRONG

"I hear you, Ahmed — and you're right to be upset. The 10-day window is for change-of-mind, but a defect is different. Let me open a warranty claim instead — you're covered for 12 months. I'll send the link now."

3 things to remember

Three takeaways from the Soft Skills section — what every Revibe TM must do under pressure.

01

Run ONE retention line on cancel requests — then stop if they say no. Never retain angry, abusive, or fraud-suspected customers.

02

Angry customer = LEARN method (Listen, Empathize, Apologize, Resolve, Notify). Read the full message, name the feeling, give a concrete timeline.

03

Escalate when asked, when compensation > 500 AED, or when policy doesn't fit. Always include: ticket #, summary, what you did, what they want, your rec.
